

Bird Rehabilitation Pen

Application Guide

The specially designed pens allow the bird, after wash and rinse, to move and behave normally while minimizing further damage to its feathers and body. The pens help in keeping the bird from becoming contaminated with its own droppings (with the latter falling through the mesh). A pet grooming dryer is normally attached to the pen to accelerate the drying process. The bird will feel warm and begin much needed preening which realigns the feathers in a tight overlapping pattern, in turn creating a waterproof seal.
